Information Security Executive Summit

Ensuring Security and Compliance
in a Cloudy and Mobile World

28 – 29 February 2012
Richmond Hotel, Richmond, Surrey, UK

www.informationsecuritysummit.com

3rd Annual Information Security Executive Summit

The 3rd annual Information Security Executive Summit will cover the critical issues and considerations that Information Technology and Information Security Leaders need to be mindful of when planning their IT Strategy for 2012 and beyond.

The key focus of the 2012 Summit will look at the ever increasing threats to IT infrastructures from both internal and external sources. Combined with accelerating demand from business, information security will always be a top priority for IT Leaders. Through Keynote Sessions, Executive Round Tables and IT leader Think Tanks, case studies will illustrate what has worked and what hasn't worked when deploying information security.

The 2012 summit is critical for all CISOs, CIOs, IT Directors and Heads of Information Security and those key decision stakeholders with decision making authority. The lead sessions and topic focus will incorporate the major challenges including:

- Risks of mobile devices and the evolving security threats of cloud computing
- The ever-challenging compliance with data protection – taking appropriate measures to adhere to legal requirements but still allow for the higher demands of flexible working
- Data leakage challenges
- Mobile applications and security
- Worldwide security threats and vulnerabilities
- Modern day hackers and tackling the threats
- Ensuring business continuity
- Facebook and Twitter – keeping abreast of the major security issues surrounding social media
- Ensuring supplier and internal communication relationships are watertight

Why Attend?

- Ensure your Information Security strategy is aligned with next generation IT Infrastructure and Operations initiatives
- Network with peers with similar objectives and challenges to share experiences and best practice
- Ensure your security and risk management strategy is aligned to business needs by creating an effective vision, strategy, and roadmap
- Understand how to evaluate and address the new security risks presented by cloud computing, virtualisation and consumerisation of IT
- Ready yourself for new regulatory, compliance and privacy regulations
- Learn the key evaluation criteria you need to apply when evaluating Information Security vendors

Featured Speakers

Tony Hird

Chief Technologist, British Airways

Quentyn Taylor

Head of Information Security,
Canon Europe, Middle East and Africa

Michael Paisley

Head of Information Risk & Business Resilience IT
& Operational Risk, Santander UK plc

Christophe Gabioud

Divisional Information Security Officer,
UBS Investment Bank

Simon Rice

Principal Policy Adviser (Technology),
Information Commission's Office

Andy Lee

Head of Information Technology Security,
BIG Lottery Fund

John Ross

Deputy Director, ICT Strategy & FM,
BIG Lottery Fund

Julia Harris

Information Security Officer, Oxfam

Paul Wilson

Information Technology Security Manager,
Yorkshire Water

Richard Bell

Information Security and Audit Director,
TFL

Gordon Holmes

Cyber Industry Liaison Office, Policy Central e-crime
Unit, Met Police

Tom McArthur

Director of Operations/Head of Information Security,
National Policing Improvement Agency

Venue

144-150 Richmond Hill,
Richmond-upon-Thames,
Surrey, TW10 6RW.

Tech:Touchstone creates business to-business events for the IT sector where face-to-face communication is paramount to fully understand complex issues, solutions and value propositions.

A critical business choice to get your organisation decision ready.

Tech:Touchstone Executive Summits bring together senior IT executives, industry analysts and leading vendors face-to-face to network, discuss and learn about cutting edge technologies that will drive strategic IT initiatives in-line with corporate objectives.

Delegate attendance is by invitation only and sponsors are the proven ‘best of breed’ vendors in their field.

Through unbiased research, End user case studies and input from industry experts, Tech:Touchstone helps IT business leaders make the right decisions by providing leading edge business intelligence and real life experience from CIOs and Heads of Information Security who have taken their organisation to the next level in Information Security strategy.

The Information Security Summit consists of a series of strategic sessions, built by our Programme Director and based on the individual delegates projects and interest areas, to ensure you get the most out of the 2 day summit.

Analyst Keynote Sessions

Industry insight by leading Analysts, providing in depth industry insight into the industry trends surrounding Information Security.

Best Practice Case Studies

Learn from other IT leaders who are ahead of the curve. Understand their completed initiatives with best practice, ready to be put into action. The “how tos” and the “pit falls” to watch out for.

IT Leader Think Tanks

Senior enterprise/public sector IT leader facilitating an interactive peer group, providing “take-aways” from a strategic and/or execution perspective.

Peer to Peer Networking

A mixture of formal one to one sessions and informal networking opportunities including a gala dinner and drinks reception.

Thought Leadership Sessions

Visionaries from the vendor community, sharing innovative ideas and cutting edge methodologies. An information packed session supported by a wealth of end user experience and real client case studies.

Executive Roundtables

Focused round tables in a boardroom environment, driven by a “best of breed” vendor. For the vendor, an exclusive consultation on relevant projects and strategies with the opportunity to address individual needs and accelerate the sales cycle.

For the peer group of 12 enterprise and public sector IT executives, a dynamic environment to discuss with peers, similar challenges and discuss plans to address them, guidance and direct questions about key business concerns to experts in IT strategy and execution.

CIO Keynote Session

An experienced and respected CIO, delivering first-hand experience of defining the Information Security strategy in alignment with core business drivers: Business agility, cost efficiency, flexibility, scalability. Strategic insight to help with the development and execution of the project initiatives – “lessons learnt and issues faced”.

Day One Programme

Tuesday 28th February 2012

Registration, coffee and networking

Analyst Keynote

Monitoring cyber-crime – a national challenge

This session will bring to the forefront some of the work undertaken by the Police Central e-crime Unit and what this is being done to meet the challenges of detecting e-crime. A designated policy approach and new initiatives are used to investigate cyber-crime and to dig deep beneath fraudulent activity, and particular emphasis is on how the team work with industry and in collaboration with other groups to monitor e-traffic and to combat threats to internet security.

Speaker: **Gordon Holmes**
Cyber Industry Liaison Office
Policy Central e-crime Unit, Met Police

Executive Round Tables

Coffee, networking and 1:1 sessions

Thought Leadership Session

Data Leakage – a user-awareness tool?

In this session, you will hear about avoiding data leakage and the tools needed to set systems in place. It will study best practice organisational set-up and some case study material. There will an opportunity to look at data leakage prevention tactics and some effective procedures and recommendations.

Speaker: **Christophe Gabioud**
Divisional Information Security Officer
UBS Investment Bank

Executive Round Tables

Lunch, networking and 1:1 sessions

Best Practice Case Studies

Advanced Information Risk & Control Management

- Strategic Alignment – linking delivery to strategic intent
- Integrating security & resilience
- Control Performance Management – KRI's, KPI's
- Quantitative Risk Analysis using Monte Carlo simulations
- Use of Aggregated Dashboards to communicate to senior stakeholders

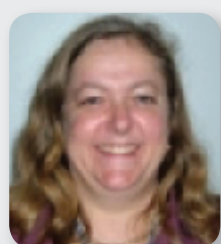

Speaker: **Michael Paisley**
Head of Information Risk & Business Resilience
IT & Operational Risk
Santander UK plc

The risks and benefits of mobile devices and the cloud

Mobile devices and the cloud allow for greater flexibility in the workforce but present different challenges in ensuring compliance. The Data Protection Act requires data controllers to take appropriate measures to protect personal data but how can they achieve this whilst still maintaining a mobile and flexible workforce? Can the controls applied within the corporate network be extended across the internet to mobile devices and cloud services?

Speaker: **Simon Rice**
Principal Policy Adviser
Information Commission's Office

Mobile working – case study highlighting the very real challenges of virtualisation security

What challenges does the cloud provide for information security, particularly the challenges for in-house and the problems with overseas data centres? What about the increase in workforce mobility and greater decentralisation of IT processes and the growing use of social media? Is there a very real threat that there could be a loss in direct control over data and applications?

Speakers: **Andy Lee**
Head of Information Technology Security
BIG Lottery Fund
John Ross
Deputy Director, ICT Strategy & FM
BIG Lottery Fund

Executive Round Tables

Coffee, networking and 1:1 sessions

Executive Round Tables

Best Practice Case Studies

Ensuring security in remote locations – becoming aware of modern-day hackers

- Remote working is the way forward but how is this possible in areas of the world where there is little or no infrastructure?
- Coping with lack of operational solutions and trying to make suitable adaptations
- Supporting networks to evaluate, adapt and implement strategies to ensure that security procedures across the organisation and across the world are watertight when there is a lack of infrastructure in place – using Oxfam as a case example of an organisation which is worldwide but has the same major challenges of espionage and hacking

Speaker: **Julia Harris**
Information Security Officer
Oxfam

Business continuity – risks, threats and actions – management and technical challenges

- So you think it is never going to happen to your organisation!
- Finding out what major threats are likely to emerge – is information security that important to your business for it to continue to function?
- Ensuring that there is a policy and programme management plan in place
- Developing and implementing a business continuity response – case example of how Transport for London are prepared
- Exercising, maintaining and reviewing – a continuous process

Speaker: **Richard Bell**
Security Audit Manager, Security Risk and Assurance
Transport for London (TfL)

Close of day one

Pre-Dinner Drinks Reception and Networking

Gala Dinner

Day Two Programme

Wednesday 29th February 2012

Networking breakfast

Chairman's opening session leading into a panel session

Executive Round Tables

Coffee, networking and 1:1 sessions

Thought Leadership Session

The benefit that consumerisation of IT brings but also the associated information security risks – case study from Yorkshire Water

- Tackling new technology and also new user generation
- The rise of the internet generation, including Facebook and Twitter: how security issues are being tackled in this challenging area
- Mobile devices including iPads and smartphones: security being one of the major challenges of the new mobile world and ways around IT department controls
- Highlighting the risks which are sometimes not that obvious: what are others in the industry doing to mitigate very real threats?

Speaker: **Paul Wilson**
Information Technology Security Manager
Yorkshire Water

Executive Round Tables

Lunch, networking and 1:1 sessions

Executive Round Tables

End User Case Studies

BA's 5 year security strategy

Ever since the internet revolution enterprises have been adding more and point solutions to mitigate each new threat type as it emerged, this has worked well to date, giving organisation defence in depth but the paradigm shifts relating to cloud, mobile computing and consumerism requires new thinking.

Having safety and security at the heart of it's operation, British Airways has been consolidating its 5 year IT security plans and created a vision to ensure it is in the best possible position to handle the challenges ahead.

Speaker: **Tony Hird**
Chief Technologist
British Airways

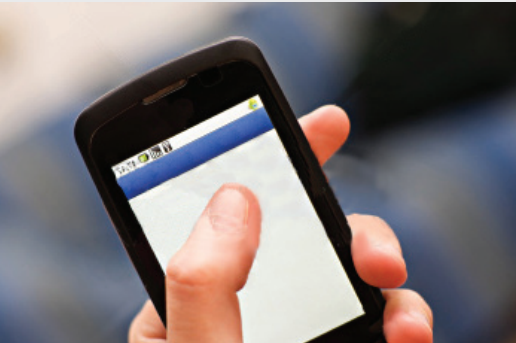

Developing a secure relationship between your supplier, internal teams and customers to reduce data loss and human negligence

- Knowing the questions you need to ask to minimize your risk
- Understanding the current solutions that can be delivered
- Who needs to be involved internally to ensure you make the most of your chosen solution
- Training your users to make them aware of the unique risks
- Making the print solutions work for you, making it part of your threat defence toolkit not a risk

Speaker: **Quentyn Taylor**
Head of Information Security
Canon Europe, Middle East and Africa
